FracTEL®

Telecom Perfected™

**Our customers told us that
the communication needs of modern business
could not be satisfied by conventional telecom technology**

So we asked a simple question…

"If the business phone system was invented today,
how would it work?"

Introducing…

Cloud**Voice**™

FOR BUSINESS

The patented platform that will enable a
new era of transformative telecommunications

Transformative Applications

Immediate Savings and Unprecedented Reliability

Built from the ground up, the patented FracTEL network provides immediate and significant savings when compared to traditional telecom service. Whether the party you are calling is across town or on the other side of the world, our proprietary PriceRouter™ technology means FracTEL can fully leverage massive buying power to keep the cost low - and pass the savings on to you.
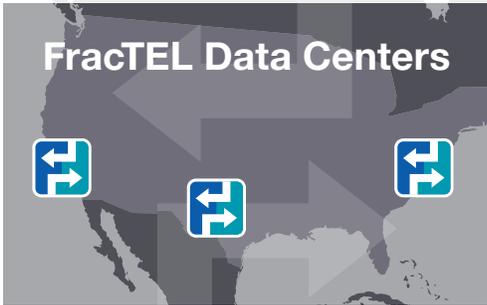

FracTEL's customers typically save 50-90% over the cost of traditional business phone services, while exceeding the standards of quality and reliability businesses expect from their phone system. Many legacy VoIP and Hosted PBX companies can offer savings over traditional PBX systems, but only FracTEL has a patented network that harnesses the true power of the cloud - creating the most technologically advanced and reliable phone system ever developed.
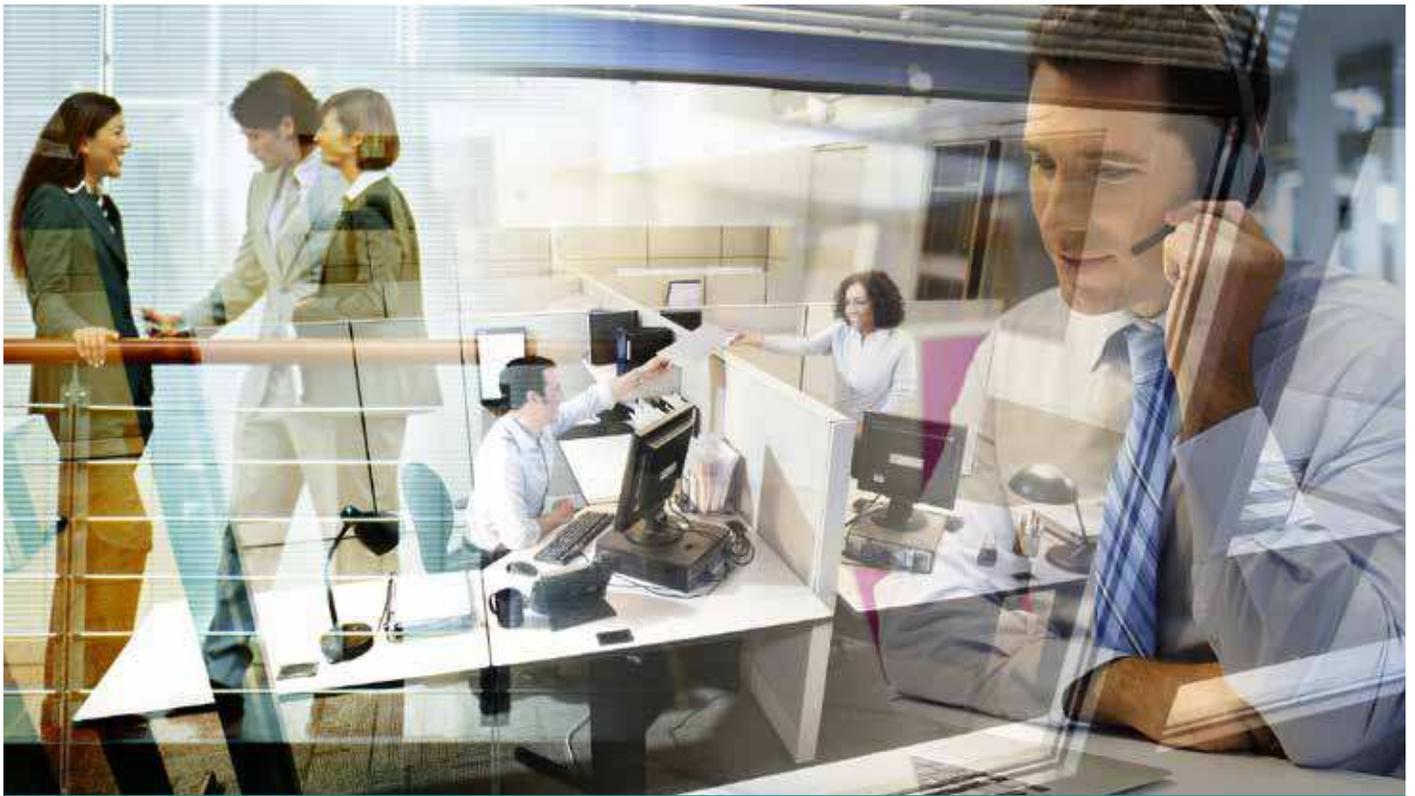

With FracTEL, all PBX and call processing services are pooled and distributed across three fully redundant, geographically dispersed data centers. There are always three connections for every call, and there is no single point of failure anywhere in the network. FracTEL is the only telephone network with a 100% Uptime Guarantee, providing peace of mind that your voice will be heard no matter where you are in the world.

GUARANTEE

Long Term Value, Scalability and Security

FracTEL allows companies to dramatically reduce the CAPEX associated with owning a traditional PBX phone system, and only FracTEL can provide the option for a Hybrid-Cloud solution that can support expanding and transitioning a company's capabilities by utilizing their current assets, including existing phones and systems.

FracTEL's unique advantage over VoIP and Hosted PBXs is scalability. FracTEL's patented feature-based PBX offers an unlimited number of connections, so that even enterprises with many 1000's of employees, large offices, and multiple locations can take advantage of the cost savings, management tools, and transformative applications that only FracTEL can provide.

ADVANCED
256-BIT
Encryption

By eliminating the premises PBX and upgrading to FracTEL's feature-based platform, companies will also limit their exposure to PBX Hacking, a crime which cost businesses $25 Billion* last year. In addition, FracTEL offers advanced 256-bit encryption and HIPPA compliance with every call, fax, text, or video. No other solution can offer the savings, scalability and security that FracTEL can.

Transformative Integrated Communications

While other information systems have evolved from analog to digital and then to interactive, the business phone system has remained stuck with one foot in the electronic dark ages. Now, FracTEL enables a major paradigm shift with the introduction of TeleApps - and the power of Integrated Communications - to the arsenal of the enterprise. FracTEL has re-invented telecom as a modern Information System that can be easily integrated with other Information Systems.

Uniquely enabled by a patented feature-based PBX architecture, TeleApps™ are exclusive to the FracTEL Integrated Communications platform. TeleApps provide a mechanism for telecom enabling IT, and for IT enabling telecom. They offer a unique and powerful way to optimize and automate your business processes in ways that are truly transformational. It's another reason why the FracTEL network was built from the ground up and is unlike any other solution on the market.

Imagine a world where a hospital patient's bedside monitor can notify, connect directly, and log contact with a specialist, bypassing time wasting answering services, transfers, messages and call backs - all while remaining HIPPA compliant and simultaneously protecting the doctor's privacy. *Now you're connecting with FracTEL.*
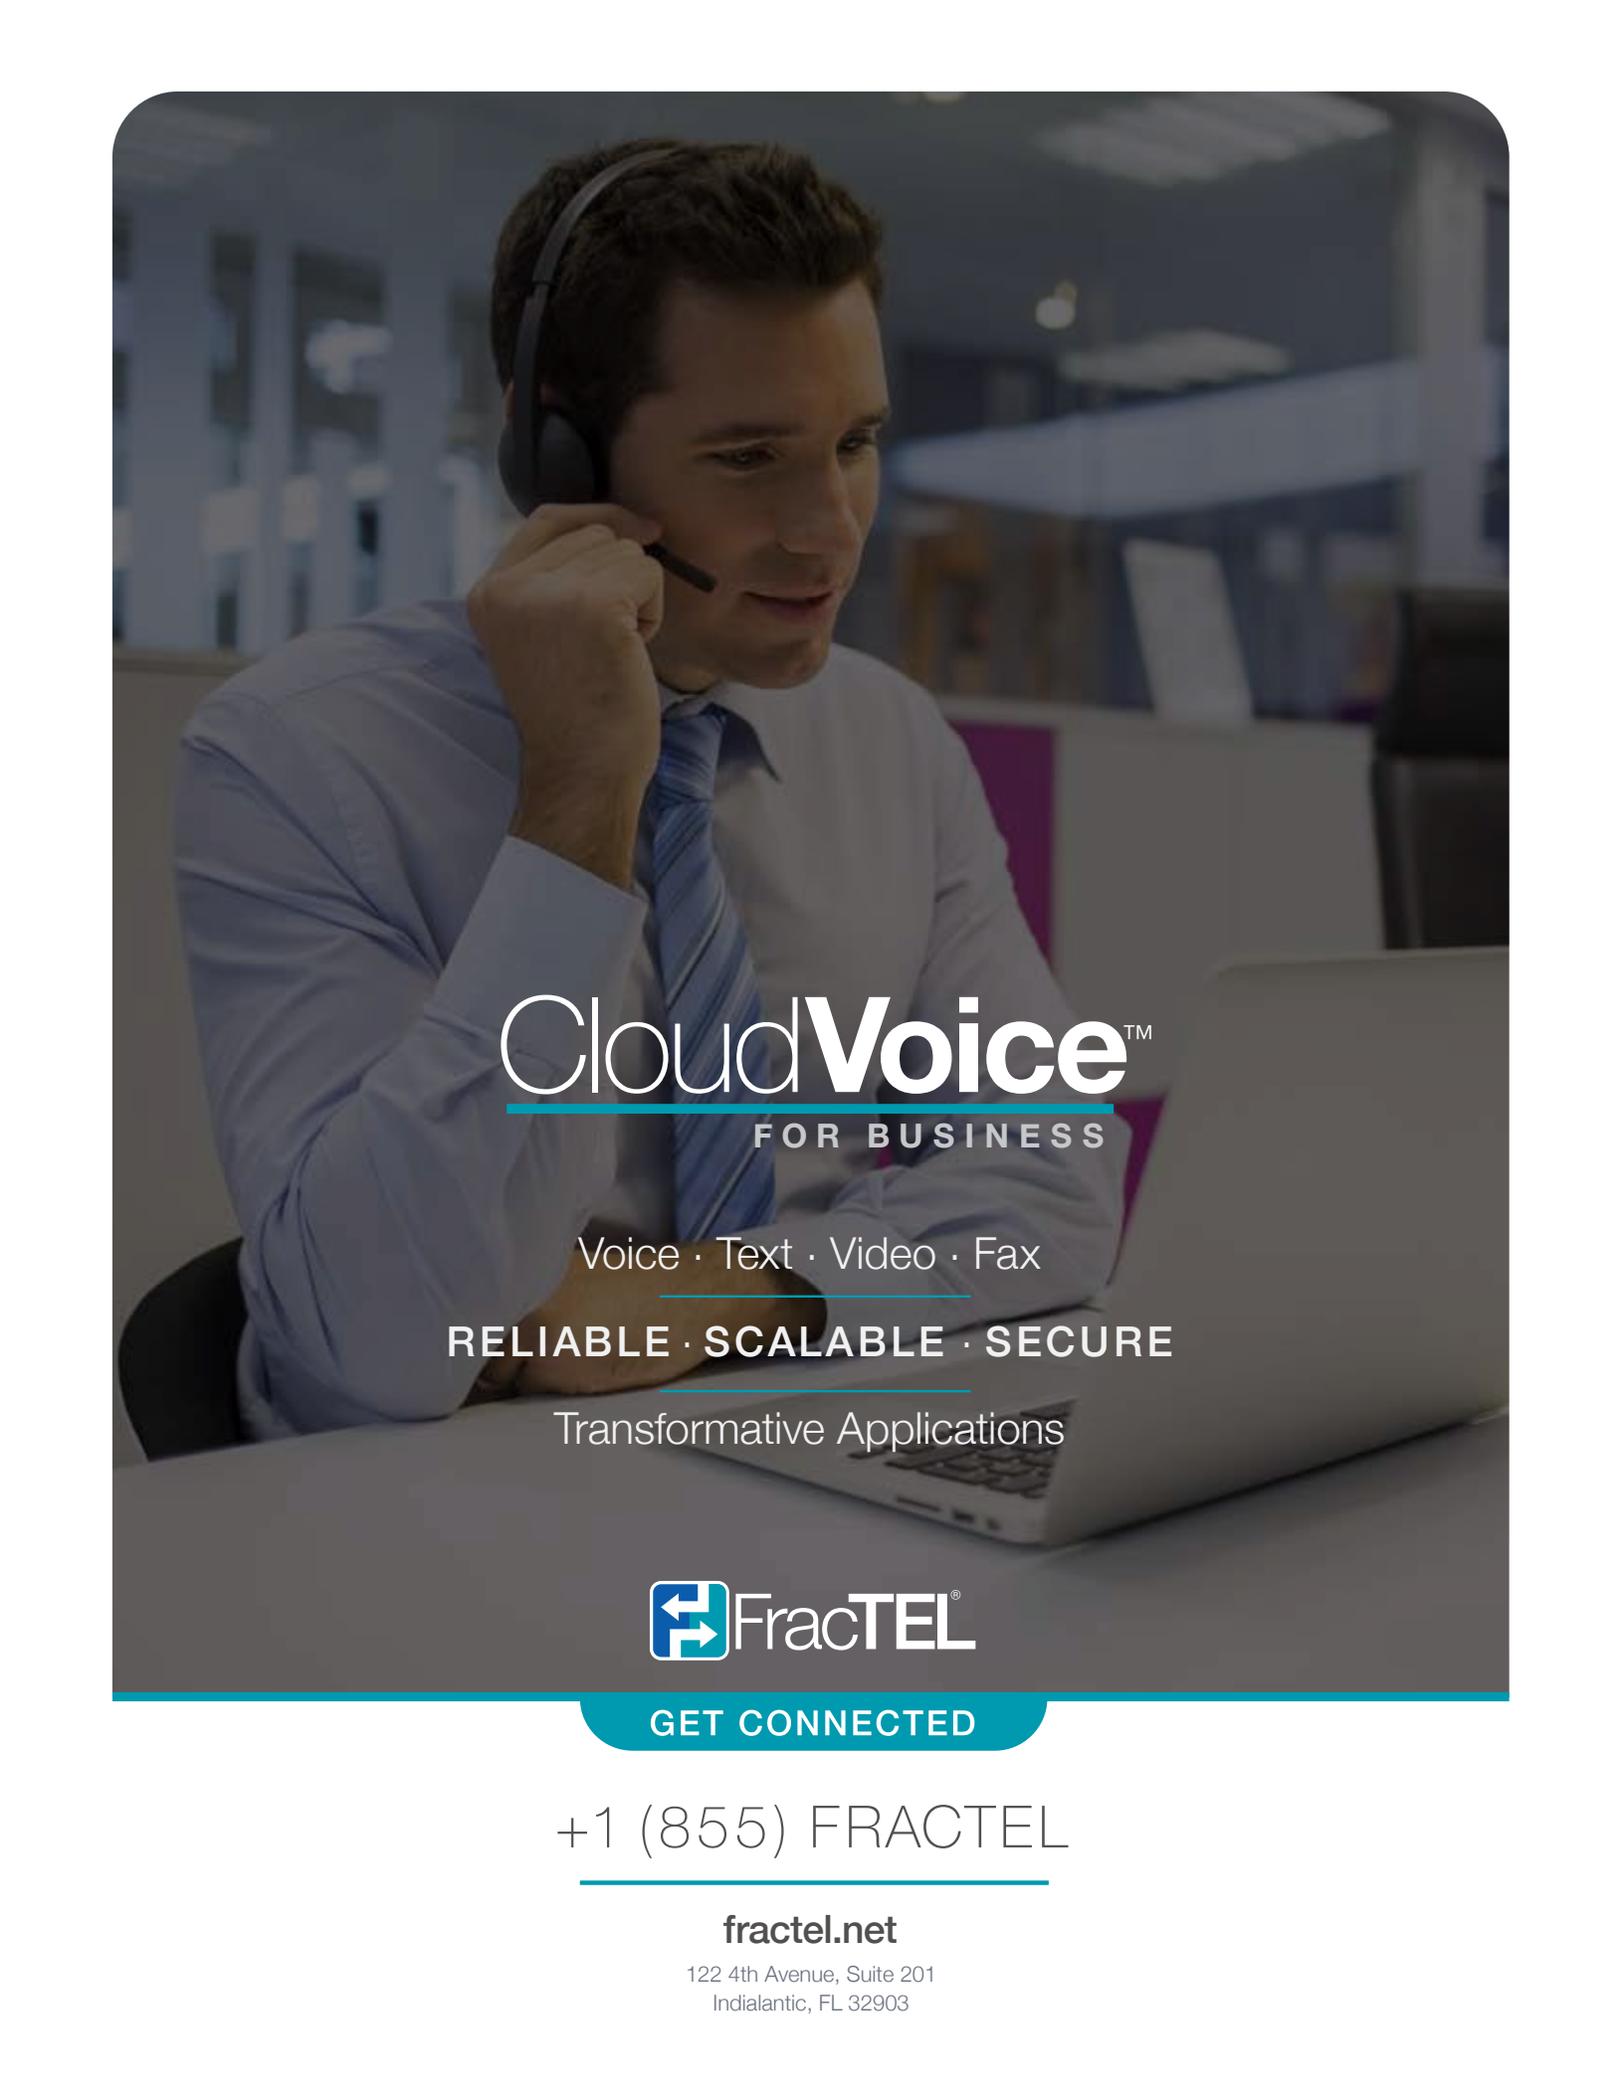

Always Connected

The FracTEL network is revolutionary, and so are the many ways you can get and stay connected.

From the start, FracTEL worked closely with the best equipment manufacturers in the world to develop technology that provides comprehensive integration and automated management of the most advanced devices in the industry - including the GXV3275 Desktop Smartphone. Our partnership program with manufacturers ensures that phones certified for use on the FracTEL network work reliably, securely, and integrate all of the most sophisticated features.

In addition, FracTEL adds mobile connectivity and BYOD support to your business phone system. The FracTEL Mobility Apps for iOS, Android, Windows, and OSX allows business teams to stay connected and continue collaborating while away from their desks – inside and outside of the office.
